reduce food waste

Spinner results favour a combination of meals using similar ingredients

This needs a LOT of thinking through to provide variety

Ideally if you're buying something fresh that you don't need for a whole meal you have two meals that use it

e.g. buy a lettuce for tacos Also make something with a lettuce salad that week to use it up

e.g. tomatos come in packs of 6, you need 4 so you know you'll always want to use 2 extra

add ability to save price per item or price per shop

arcode scan item, stores data from it for interesting tracking - what does the barcode scan give you?

always entered their prefered number of eater

help user adjust App v1 will expect user ingredients so it's to enter a recipe for 2 'for one meal' for people for 1 night

> In future maybe a user can enter a recipe that is designed for 4 people and we can calculate it for 2, or 3

Tricky as it's not necessarily a case of 'just divide'

Add meal type label e.g. casserole,

View ingredient list for shopping
